# SOUTH Target your success

## **Video Shooting & Laser Measurement** — Add Them Together to Multiply Your Power

# Laser Stakeout & CAD AR Stakeout - Lift Your Efficiency to A New Level

### Measure More & Farther, in shorter time

### You are More Efficient than Ever

ALPS1 allows you to shoot a group of photos or videos in realtime, obtaining coordinates for hundreds of points within minutes. It outpaces traditional RTK in data acquisition speed.

With laser measurement, ALPS1 has a broader working range and fewer blind spots, enabling remote measurements in areas with poor GNSS signal quality. Previously challenging spots, like spaces under rooftops and areas with obstacles, are now easily measurable.

Measure at Day or Night, Real-time or Non-Real-time, by Your Need

### You are More Versatile than Ever

Image data, stored for an extended period, is reusable at any time. These capabilities are especially well-suited for unique tasks, such as documenting accident scenes and excavation sites for urban public facilities.

Laser measurement allows surveyors to collect target point at a dark environment such as night or semi-indoor environment. It also can measure distance indoor.

### To Overcome the Difficulty

Lasers bring more possibilities to staking out.

Now, when you encounter tall obstructions near the target point in the field that block satellite signals, you will no longer be helpless.

Please just enable laser and continue the work.

Additionally, when it is inconvenient to carry instruments to the target point, you can also choose to stake out by laser from a distance of several meters away.

Large Area or Tiny Space? ALPS1 Suits Both You are More Flexible than Ever

Video Shooting allows surveyors to remotely measure points up to 10 meters or more (15m in ideal conditions), eliminating the need to physically approach each point. This method significantly reduces physical effort when surveyor is working in a large area.

Laser Measurement allow users to realize a very

quick non-contact measuring when there is only very

limited space to move, such as a narrow alley. In this

kind of scenario, laser is faster than video shooting.

Laser

# **Simplify Your Workflow with CAD**

ALPS1 can integrate the content of CAD drawings with real-world scenes, helping you stakeout targets more quickly.

The front camera assists surveyors in finding a general direction from a distance and understanding the distribution of surrounding features. The bottom camera enables precise stakeout as you approach the target.

With dual camera's help, your stakeout will be easier and more intuitive.

ALPS1 Keeps You Away from Dangers

## You are Safer than Ever

Video Shooting and Laser Measurement help users mitigate risks when surveying near hazardous areas, such as busy roads and sea or lakes, ensuring surveyors' safety. A secure working approach is not only a personal requirement but also essential for the well-being of your family.

# **Diverse Applications Prepared for Your Future Needs**

SOUTH

1

# **CONSTRUCTION**

State Canada Y

### Work Faster, Work Better

Through the further development of laser measurement, ALPS1 can directly measure road lengths from a distance, obtain area measurements for defined regions, calculate earthwork volumes, and more. This expands from simple point measurements to comprehensive calculations, helping you complete measurements more quickly in construction projects.

# FORESTRY

### Save Labor, Save Time

In forestry, ALPS1 combines laser measurement with eccentric measurement to help users quickly calculate the center position of tree trunks. When paired with 3D modeling, it not only provides intuitive and visual results, making complex data easier to understand and analyze, but also allows for the integration of data from other sources, resulting in more diverse and comprehensive outcomes.

## **UAV MAPPING**

### **Create More with Less**

ALPS1 utilizes SOUTH's 3D modeling technology, integrating image measurements seamlessly with UAV data from DJI and other brands, meanwhile laser measurement save time for recording extra control points, addressing data gaps in UAV surveys. Surveyors can integrate image data into SOUTH software and third-party modeling software for efficient 3D modeling.

# **Best Hardware To Win the Challenges**
